

Project: South Salt Lake Residential Street Lighting Improvement

Recipient: City of South Salt Lake

Location: South Salt Lake, Utah

Purpose: Many residential neighborhoods in South Salt Lake have developed without adequate street lighting as much of it is non-existent, outdated, or in poor condition. Lack of adequate street lighting encourages crime and diminishes the feeling of security for residents in their neighborhoods. A lack of street lighting also creates the appearance of rundown, neglected neighborhoods. The requested funds will assist the City's first phase of street lighting upgrades, which will focus on the residential area east of State Street. City staff will determine where new street lighting will be installed based on the condition of existing street lighting, crime statistics, and anticipated benefit to the neighborhood. The public and key stakeholders will be included in the decision making process to ensure community acceptance of the project.

Amount: \$750,000
